

# Mobile Shape Table Operating Instructions:

## Important Note:

These tables are designed to operate with ease without torsion bar lift assist and without a storage lock. This is achieved due to the balancing design of the table's geometry and center of gravity. That being said, **these tables are very easy to operate by following these instructions.** They can be cumbersome and difficult if not operated as described below.

- MT48R/Q/H (round, square, hexagon)
- MT60R/Q/O (round, square, octagon)
- MT72R/V (round, 60" x 72" oval)

## Opening Table:

- 1) Tables are best opened by using one side of the table leaf. Face the side of table and grasp table top. Bend at the knees if necessary.
- 2) Lift up with the outer hand while at the same time push down with the inner hand (closest to center of table). **See Figure #1.**
- 3) Continue this motion until table locks in the 2/3rd's open position (cleaning mode). **See Figure #2.**
- 4) Grasp the underside of the center of the top while also lifting the down lock handle with the same hand. **See Figure #3.**
- 5) Push down on the end of the top to release pressure on the down lock and hinge. Slowly lower the table to the open position and release down lock.

**Double check that the down lock is engaged BEFORE using the table. See Figure #4.**

## Folding For Storage:

- 1) Tables are best folded by using one side of the table leaf.
- 2) Grasp the underside of the center of the top while also lifting up the down lock handle with the same hand. Lift up on the end of the top if necessary to release pressure on the down lock. **See Figure #4.**
- 3) Push down with the outer hand while at the same time lifting up with the inner hand (closest to center of table) to fold the table completely. The table should look as shown in **Figure #1.**

### Standard Maintenance:

To ensure table life & quality operation; check & tighten fasteners & lubricate pivot points every (6) months.

### WARNING:

Table should be moved and operated by authorized adults only! Children and students should NEVER move or operate tables. Always engage storage latch to prevent tipping. Failure to follow warnings may result in serious injury or death.

### WARNING:

To avoid tipping over, only push from side of table. DO NOT push from the table top side! Avoid rolling table over debris on the floor.

When Moving Table:  
 Always push from the folded end of the table.
