

Store and Charge Buyer's Guide

Store and Charge Buyer's Guide

Today's classrooms need store and charge solutions that can manage a variety of device types from cell phones to laptops. With devices cycling out every three to six years, it only makes sense to use your budget wisely and choose storage solutions that meet your needs today and can also grow with you. To help with your selection, this buyer's guide provides key features to look for when specifying and buying and includes an overview of Intellerum's store and charge products for education.

If you need additional support selecting products that meet your needs and your budget, contact Intellerum at

Key Features to Consider

UNIVERSAL STORAGE AND CHARGING

Most schools don't use just one type of device. Chromebooks, laptops, iPads, and even cell phones may all be part of the mix, so you need to make sure your store and charge product can accommodate different device sizes and their power cords. Choose a product that has space for your largest devices as well as your smallest ones. Removable, reconfigurable dividers can also allow you to adjust the number of storage spaces as your device quantities change.

Setup Assistance

Intellerum can save your IT team time by prewiring your cart, depot, or locker. Ask your Intellerum representative for details.

Budget Support

Intellerum will work with your budget to make sure you get the store and charge products your school needs at a price you can afford.

SPACE-SAVING

Classrooms are busy, active places and space is often at a premium. If your storage solution doesn't need to be mobile, consider a tall, narrow store and charge station or a smaller, portable depot to save space. These options can be placed in a corner, on top of a desk, or beneath a table. They can also be stacked to expand storage as needed. If storage needs to be mobile, look for a cart with a compact design and integrated features like handles and cord wraps. Laminate tops are also available so the surface can double as a workspace.

EASY IT SETUP

Your IT team has a vested interest your device storage choice because they have to wire the cart or station and load it with devices. The best products offer easy access to loading and wiring areas with doors that fully swing open or retract into the cart and rear access with plenty of room for IT personnel to set up devices inside.

CABLE MANAGEMENT

An effective cable management system separates and secures power cords and places the cords within easy reach of the user. When power cords are kept organized and orderly, loading and unloading time is significantly reduced, leaving more time for instruction.

AC CHARGING: SMART CHARGING & AUTO-SHUTOFF

In addition to basic AC charging, store and charge products can also include smart charging and auto-shutoff. Smart charging is the ability to monitor the amount of power available and distribute that power to charge the greatest number of devices in the least amount of time. An external display indicating when all devices or tiers are fully charged is also useful for classroom teachers, so they can be confident devices are ready to go. In addition, an auto-shutoff feature stops charging devices once they have reached a full charge, which saves energy and extends battery life.

USB CHARGING & SYNCING

Store and charge carts and stations are available with USB ports for charging and syncing. The added syncing capability of USB allows for configuration of multiple devices at once and uploading and updating of software by connecting the cart or station to a host computer.

Key Features to Consider (continued)

SECURITY

For maximum security, a cart or station should be constructed of heavy duty steel, and doors and access panels should be fully hinged to deter unwanted entry. On large doors, the locking mechanism should secure the door at multiple points to prevent doors from being easily pried open. A three-point lock that secures the door at the top, middle, and bottom provides a much higher degree of security.

DURABLE CONSTRUCTION

Your store and charge product needs to be tough enough to handle the daily activities of the classroom and strong enough to support the weight of devices when fully loaded. Heavy-duty steel and a powder-coated finish help ensure the cart or station can withstand the wear and tear of loading, unloading, and other incidental contact while also maintaining an attractive appearance throughout the life of the product.

MOBILITY

For maximum control of carts during transport, make sure the cart's handle is positioned to allow comfortable steering and that the wheels roll smoothly to assist the driver in maintaining control. Locking and directional locking casters can help lock the cart in place when it's parked and control the direction of cart movement when it's in motion.

VENTILATION

When devices are stored inside a cart or station and are actively charging, they generate a lot of heat. Ventilation in the form of small, patterned slots or openings in the cart must be present to allow heat to escape and to protect devices from overheating and incurring damage.

WARRANTY

A good warranty that includes the construction and electrical components of your product will give you the peace of mind that comes with knowing the product will last and that you're protected if it doesn't.

Intellerum Store and Charge Products for Education

UNIVERSAL STORAGE AND CHARGING

- Chromebooks
- Laptops
- iPads
- Tablets
- Netbooks
- Cell phones
- E-readers
